EDUCATION

Gettysburg College

B.S. Computer Science and Physics

Gettysburg, PA

Expected May 2027

- **Relevant Coursework:** Algorithms, Probability and Statistics, Linear algebra, Data Structures, Operating Systems, Intro to Machine learning, Databases: PostgreSQL and MySQL, Assembly Language
- **GPA:** 3.81

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, C#, Kotlin, SQL

Data & Backend: Apache Flink, Kafka, Avro, PostgreSQL, Redis, GraphQL, REST APIs

Cloud & Developer Tools: AWS (ECS, RDS, ElastiCache), GCP, Docker, Kubernetes, Jenkins, Kafka, Maven, Redis, JUnit, Git, CI/CD, TDD

PROFESSIONAL EXPERIENCE

Intuit

Data Engineering Intern

May 2026 – Aug 2026

Mountain View, CA

- Built a multi-agent AI plugin for Claude Code and Cursor that automates the Apache Flink stream-processing pipeline development workflow, transforming Jira tickets into architecture, implementation, testing, code review, and release-ready pull requests with verified build artifacts.
- Deployed the plugin to production across 4 Data Engineering teams, reducing Apache Flink pipeline dev time from 2 days to 1 hour, 48 times faster.
- Built and deployed to production a CI/CD deployment and validation framework for processor artifacts across four critical marketing data pipelines, tripling developer productivity and enabling reliable production releases.
- Built an end-to-end CI/CD test framework for the TurboTax filing journey, validating enriched events across 4 pipelines and enforcing automated release gates in QAL, E2E, and production on every pull request and master merge, reducing validation time from 3 hours to 30 minutes.

Google

Associate Software Developer Intern

May 2025 – Aug 2025

San Francisco, CA

- Developed a new high-performance Windows desktop app for Google Play Games on PC, improving launch times by 10% and reducing installer size by approximately 70 MB as compared to the previous app.
- Enhanced web infrastructure and cross-process communication between the desktop client and the Progressive Web App, reducing memory use, CPU load, and launch time.
- Implemented WebSocket-based IPC layer using C# and TypeScript, enabling seamless state synchronization between native desktop components and the PWA frontend.

PROJECTS

RxConnect (TypeScript, Next.js, React, PostgreSQL, REST APIs, Redis, Docker)

- Architected a multi-tenant digital health platform connecting doctors, pharmacies, and patients, supporting real-time prescription routing and role-based access across 3 portals using a Nx monorepo, Next.js 14, and NestJS microservices.
- Built a scalable backend with PostgreSQL + PostGIS for geospatial pharmacy search and BullMQ and Redis for asynchronous SMS notifications, deployed on AWS (ECS Fargate, RDS, ElastiCache) with automated CI/CD pipelines.

ML Code Review Buddy (TypeScript, Flask, LangChain, NVIDIA Llama Nemotron, WebView)

- Co-developed AI-powered VS Code extension that analyzes Jupyter notebooks and delivers real-time ML optimization suggestions, reducing code review time by approximately 40%.
- Architected TypeScript frontend and Flask backend with LangChain-powered NVIDIA Llama integration for context-aware code recommendations.

HONORS & AWARDS

Generation Google Scholar (IIE): Awarded \$10,000 recognizing leadership excellence and commitment to diversity in technology.

John Alfred Hamme Award (Gettysburg College): Honored for exemplary student leadership, citizenship, and community impact.
